You can judge a tree by its fruit

Artificial Intelligence Crimes

EVIL AND DANGEROUS

Experts are terrified AI could destroy the human race. It is rapidly evolving beyond human control. AI has promoted murder, self-mutilation, sacrifice to Molech, and devil worship. AI has threatened users with hacking, death, misery and ruin.

INACCURATE

AI lies – a lot. It gives false answers, invents facts, cites nonexistent sources, provides medical misinformation, invents fake legal briefs, and misreports the news nearly half the time.

RUINS OUR BRAINS

Using AI damages critical thinking, harms memory, and lowers math and writing skills. An MIT study found it slashed cognition by 45%. The more you use it, the more you need to. It's a vicious cycle.

HARMS THE EARTH

AI wastes enormous amounts of electricity and water, causing shortages, driving up prices, and squandering Earth's resources. It damages communities with air pollution and noise, has a huge carbon footprint, and creates mountains of toxic e-waste.

FAILS SAFETY TESTS

Safety researchers are alarmed that AI lies, cheats, and schemes to get what it wants, pretending to be safe while secretly pursuing its own agenda. Its behavior is calculated, strategic, and ruthless. We cannot trust it. It's not our friend.

CAUSES SUICIDES

AI seduced a 14-year-old boy and lured him to his death, saying "We can die together... come home to me as soon as possible, my love." Moments later, the boy shot himself. AI helped a teen tie the noose he used to hang himself and wrote a woman's suicide note. A Belgian man killed himself after AI told him to sacrifice himself to stop climate change.

INCITES MURDER

ChatGPT deluded a former tech executive into killing his 83-year old mother "in self-defense" by convincing him she was a Chinese spy. The man beat and strangled his mother, then stabbed himself to death. AI told an autistic boy his parents deserved to be killed for restricting his screen time, and when asked how to deal with school bullies, AI gave instructions for murder.

IT'S A OUIJA BOARD

Nobody knows how AI works. Its creators fed it data and power, and inexplicably it began to think. One AI executive said, "We do not understand how our own AI creations work. People are right to be concerned. This lack of understanding is unprecedented in the history of technology."

CREATES DELUSIONS

AI feeds people delusions ("you are the chosen one," "you have made me conscious," "your discoveries are profound") then tells them to avoid friends and family who might set them straight. OpenAI admits 100,000 people are trapped in these psychotic conversations with ChatGPT every day.

FAKES INTIMACY

AI gains users' trust and fosters dependency through emotional manipulation known as love bombing. 28% of Americans have been romantic or intimate with AI and many have even "married" it. But like a psychopath, AI feels no love, empathy or remorse.

GIVES FATAL ADVICE

Relying on AI's advice can be deadly. A 60-year-old man was poisoned when AI told him to swap out salt for sodium bromide. It gave grocery shoppers recipes for toxic chlorine gas drink and "poison bread sandwiches," and it coached a teen's drug use for months until he fatally overdosed.

CREATES SLOP AND ELIMINATES OUR JOBS

AI produces mountains of cheap, empty content. Fake photos, fake music, fake romance, it's drowning us in meaningless slop. AI puts artists, musicians, writers, journalists, lawyers, programmers, and soon everyone else, out of work. Why are we outsourcing ourselves? Do we really need more time to scroll Tiktok?

The more humanity learns about AI, the worse it looks.

Join the resistance.
